Entries and graphical symbols explanation	
The following entries and graphical symbols are used for the manuals and the product as follows, for safety purpose. Please know their meanings beforehand, and heed them.	
 WARNING: This entry warns of a risk of serious personal injury or even death.	
 CAUTION: This entry warns of a risk of personal injury or physical damage.	

Important safety instructions

Your projector is designed and tested to meet the latest standards for safety of information technology equipment. However, to ensure safe use of this product, it is important that you follow the instructions mentioned in this manual and marked on the product.

Safety Instructions

WARNING

1. **Please read this manual before you operate your projector.** Save it for future reference.
2. **Do not look straight at the projector lens during operation.** The intense light beam may damage your eyes.
3. **Refer servicing to qualified service personnel.**
4. **Always open the lens shutter or remove the lens cap when the projector lamp is on.**
5. In some countries, the line voltage is NOT stable. This projector is designed to operate safely within a mains voltage between 100 to 240 volts AC, but could fail if power cuts or surges of ± 10 volts occur. **In areas where the mains voltage may fluctuate or cut out, it is recommended that you connect your projector through a power stabilizer, surge protector or uninterruptible power supply (UPS).**
6. Do not block the projection lens with any objects when the projector is under operation as this could cause the objects to become heated and deformed or even cause a fire. To temporarily turn off the lamp, press BLANK on the projector or remote control.
7. The lamp becomes extremely hot during operation. Allow the projector to cool for approximately 45 minutes prior to removing the lamp assembly for replacement.
8. Never replace the lamp assembly or any electronic components unless the projector is unplugged.
9. Do not place this product on an unstable cart, stand, or table. The product may fall, sustaining serious damage.
10. Do not attempt to disassemble this projector. There are dangerous high voltages inside which may cause death if you should come into contact with live parts. The only user serviceable part is the lamp which has its own removable cover.
Under no circumstances should you ever undo or remove any other covers. Refer servicing only to suitably qualified professional service personnel.
11. Do not place this projector in any of the following environments.
 - Space that is poorly ventilated or confined. Allow at least 50 cm clearance from walls and free flow of air around the projector.
 - Locations where temperatures may become excessively high, such as the inside of a car with all windows rolled up.
 - Locations where excessive humidity, dust, or cigarette smoke may contaminate optical components, shortening the projector's life span and darkening the picture.
 - Locations near fire alarms
 - Locations with an ambient temperature above 40°C / 104°F
 - Locations where the altitudes are higher than 3000 m (10000 feet).

12. Do not block the ventilation holes. If the ventilation holes are seriously obstructed, overheating inside the projector may result in a fire.
 - Do not place this projector on a blanket, bedding or any other soft surface.
 - Do not cover this projector with a cloth or any other item.
 - Do not place inflammables near the projector.
13. Always place the projector on a level, horizontal surface during operation.
 - Do not use if tilted at an angle of more than 10 degrees left to right, nor at angle of more than 15 degrees front to back. Using the projector when it is not fully horizontal may cause a malfunction of, or damage to, the lamp.
14. Do not stand the projector on end vertically. Doing so may cause the projector to fall over, causing injury or resulting in damage to the projector.
15. Do not step on the projector or place any objects upon it. Besides probable physical damage to the projector, doing so may result in accidents and possible injury.
16. Do not place liquids near or on the projector. Liquids spilled into the projector may cause it to fail. If the projector does become wet, disconnect it from the power supply's wall socket and call your local service center to have the projector serviced.
17. When the projector is under operation, you may sense some heated air and odor from its ventilation grill. It is a normal phenomenon and not a product defect.
18. Do not use the security lock slot for transporting or installation. It should be used with a commercially available theft prevention cable.

Introduction

Projector features

The projector integrates high-performance optical engine projection and a user-friendly design to deliver high reliability and ease of use.

The projector offers the following features.

- Presentation timer for better control of time during presentations
- Supports 3D display
- Color Management allowing color adjustments to your liking
- Less than 0.5W power consumption when standby mode is saving
- Wall Color correction allowing projection on surfaces of several predefined colors
- Quick auto search speeding up the signal detecting process
- Multiple sets of preset modes providing choices for different projection purposes
- One-key auto-adjustment to display the best picture quality
- Digital keystone correction to correct distorted images
- Adjustable color management control for data/video display
- High brightness projection lamp
- Ability to display 1.07 billion colors
- Multi-language On-Screen Display (OSD) menus
- Switchable normal and economic modes to reduce the power consumption
- Component HDTV compatibility (YPbPr)

- **The apparent brightness of the projected image will vary depending on the ambient lighting conditions, selected input signal contrast/brightness settings, and is directly proportional to projection distance.**
- **The lamp brightness will decline over time and may vary within the lamp manufacturers specifications. This is normal and expected behavior.**

Shipping contents

Carefully unpack and verify that you have all of the items shown below. If any of these items are missing, please contact your place of purchase.

Standard accessories

 The supplied accessories will be suitable for your region, and may differ from those illustrated.

Projector

Power Cord

VGA Cable

Multi-language user manual CD

User manual

Remote Control & Battery

GOST-R Declaration

Optional accessories

1. Replacement lamp: DT01461

Projector exterior view

Front/upper side

Rear/lower side

1. Control panel
(See "Control panel" on page 7 for details.)
2. Lamp cover
3. Vent (heated air exhaust)
4. Front elevator foot
5. Zoom ring
6. Focus ring
7. Vent (cool air intake)
8. Front IR remote sensor
9. Projection lens
10. AC power cord inlet
11. CONTROL port
12. SERVICE port
13. HDMI port
14. COMPUTER IN1 port
15. COMPUTER IN2 port
16. MONITOR OUT port
17. S-VIDEO port
18. VIDEO port
19. AUDIO IN port
20. AUDIO OUT port
21. Security lock slot
22. Rear elevator foot

WARNING

- **THIS APPARATUS MUST BE EARTHED.**
- **When installing the unit, incorporate a readily accessible disconnect device in the fixed wiring, or connect the power plug to an easily accessible socket-outlet near the unit. If a fault should occur during operation of the unit, operate the disconnect device to switch the power supply off, or disconnect the power plug.**

Controls and functions

Control panel

- 1. TEMPerature indicator light**
Lights up red if the projector's temperature becomes too high.
- 2. LAMP indicator light**
Indicates the status of the lamp. Lights up or flashes when the lamp has developed a problem.
- 3. Keystone/Arrow keys (▲▼Up, ▼▲Down)**
Manually corrects distorted images resulting from an angled projection.
- 4. ◀Left**
Used to hide the screen picture.
- 5. MODE/ENTER**
Selects an available picture setup mode. Enacts the selected On-Screen Display (OSD) menu item.
- 6. SOURCE**
Displays the source selection bar.
- 7. POWER indicator light**
Lights up or flashes when the projector is under operation.
- 8. ⏻**
Toggles the projector between standby mode and on.
- 9. ▶Right**
Activates panel key lock. When the On-Screen Display (OSD) menu is activated, the #3, #4, and #9 keys are used as directional arrows to select the desired menu items and to make adjustments.
- 10. MENU**
Turns on the On-Screen Display (OSD) menu. Goes back to previous OSD menu, exits and saves menu settings.

Remote control

1. Toggles the projector between standby mode and on.
2. **MENU/EXIT**
Turns on the On-Screen Display (OSD) menu. Goes back to previous OSD menu, exits and saves menu settings.
3. **FREEZE**
Freezes the projected image.
4. **◀Left**
5. **MODE/ENTER**
Selects an available picture setup mode.
6. **BLANK**
Used to hide the screen picture.
7. **Keystone/Arrow keys (▲▼Up, ▼▲Down)**
Manually corrects distorted images resulting from an angled projection.
8. **VOLUME (+, -)**
Adjusts the sound level.
9. **AUTO**
Automatically determines the best picture timings for the displayed image.
10. **▶Right**
Activates panel key lock. When the On-Screen Display (OSD) menu is activated, the #3, #4, and #9 keys are used as directional arrows to select the desired menu items and to make adjustments.
11. **SOURCE**
Displays the source selection bar.
12. **MAGNIFY (+, -)**
Magnifies or reduces the projected picture size.
13. **TIMER ON**
Activates or displays an on-screen timer based on your own timer setting.
14. **TIMER SET UP**
Enters presentation timer setting directly.
15. **Battery cover**

Remote control effective range

The Infra-Red (IR) remote control is located on the front of the projector. The remote control must be held at an angle within 30 degrees perpendicular to the projector's IR remote control sensor to function correctly. The distance between the remote control and the sensor should not exceed 4 meters (~ 13 feet).

Make sure that there are no obstacles between the remote control and the IR sensor on the projector that might obstruct the infra-red beam.

Replacing the remote control battery

1. Pull out the battery holder.

 **Please follow the illustrated instructions. Push and hold the locking arm while pulling out the battery holder.**

2. Insert the new battery in the holder. Note the positive polarity should face outward.
3. Push the holder into the remote control.

WARNING

Improper use may result in battery explosion, cracking or leakage, which could result in fire, injury and/or pollution of the surrounding environment. If you observe battery leakage, wipe out the leakage and then replace a battery. If the leakage adheres to your body or clothes, rinse well with water immediately.

- **Keep the battery away from children and pets. Be careful for them not to swallow a battery.**
- **Avoid leaving the remote control and battery in an excessive heat or humid environment like the kitchen, bathroom, sauna, sunroom or in a closed car.**
- **Replace only with the same or equivalent type recommended by the battery manufacturer: [type: CR2025]**
- **Dispose of the used battery according to the manufacturer's instructions and local environment regulations for your region.**
- **Never throw the battery into a fire. There may be danger of an explosion.**
- **If the battery is dead or if you will not be using the remote control for an extended period of time, remove the battery to avoid damage to the remote control from possible battery leakage.**
- **Do not recharge, short circuit, solder or disassemble a battery.**

Positioning your projector

Choosing a location

Your room layout or personal preference will dictate which installation location you select. Take into consideration the size and position of your screen, the location of a suitable power outlet, as well as the location and distance between the projector and the rest of your equipment.

Your projector is designed to be installed in one of following possible installation locations:

1. Normal

Select this location with the projector placed near the floor in front of the screen. This is the most common way to position the projector for quick setup and portability.

2. H Invert

Select this location with the projector placed near the floor behind the screen.

Note that a special rear projection screen is required.

Set **H Invert** in the **SYSTEM SETTING: BASIC > Mirror** menu after you turn the projector on.

Projection dimensions

Refer to "[Dimensions](#)" on page 50 for the center of lens dimensions of this projector before calculating the appropriate position.

 The "screen" mentioned below refers to the projection screen usually consisting of a surface and a support structure

Desired Distance (m) < A >	Minimum Screen Size (Min zoom)			Maximum Screen Size (Max zoom)		
	Diagonal (inch) < B >	W (cm) x H (cm)	From base to top of image (cm) < C >	Diagonal (inch) < B >	W (cm) x H (cm)	From base to top of image (cm) < C >
1	24	49 x 37	40	26	54 x 40	44
1.5	36	74 x 55	60	40	81 x 60	67
2	48	98 x 74	80	53	108 x 81	89
2.5	60	123 x 92	101	66	134 x 101	111
3	72	147 x 110	121	79	161 x 121	132
3.5	84	172 x 129	141	93	188 x 141	156
4	96	196 x 147	161	106	215 x 161	178
4.5	108	221 x 165	181	119	242 x 181	199
5	120	245 x 184	201	132	269 x 202	221
6	144	294 x 221	241	159	323 x 242	267
7	168	343 x 257	282	185	376 x 282	310
8	192	392 x 294	322	212	430 x 323	355
9	216	441 x 331	362	238	484 x 363	399
10	241	490 x 368	404	265	538 x 403	444
11	265	539 x 404	444	291	591 x 444	488
12	289	588 x 441	484	318	645 x 484	533

Zoom Ratio: 1.1 x

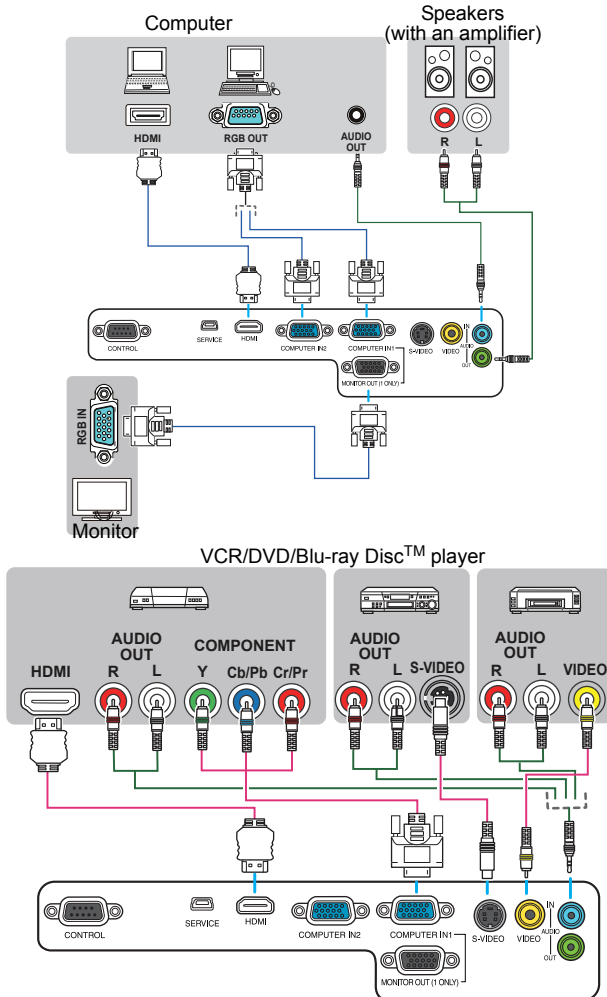

-  There is 3% tolerance among these numbers due to optical component variations. It is recommended that if you intend to permanently install the projector, you should physically test the projection size and distance using the actual projector in situ before you permanently install it, so as to make allowance for this projector's optical characteristics. This will help you determine the exact mounting position so that it best suits your installation location.
- To obtain the clearest image possible, we suggest that you keep the desired distance within 1.5 to 6 m.

Connection

When connecting a signal source to the projector, be sure to:

1. Turn all equipment off before making any connections.
2. Use the correct signal cables for each source.
3. Ensure the cables are firmly inserted.

- In the connections shown below, some cables may not be included with the projector (see **"Shipping contents"** on page 5). They are commercially available from electronics stores.
- The connection illustrations below are for reference only. The rear connecting ports available on the projector vary with each projector model.
- For detailed connection methods, see pages 13-16.

Connecting a computer or monitor

Connecting a computer

The projector provides two VGA input sockets that allow you to connect them to both IBM® compatibles and Macintosh® computers. A Mac adapter is needed if you are connecting legacy version Macintosh computers.

To connect the projector to a notebook or desktop computer:

1. Take the supplied VGA cable and connect one end to the D-Sub output socket of the computer.
2. Connect the other end of the VGA cable to the **COMPUTER IN1** or **COMPUTER IN2** signal input socket on the projector.

 **Many notebooks do not turn on their external video ports when connected to a projector. Usually a key combo like FN + F3 or CRT/LCD key turns the external display on/off. Locate a function key labeled CRT/LCD or a function key with a monitor symbol on the notebook. Press FN and the labeled function key simultaneously. Refer to your notebook's documentation to find your notebook's key combination.**

Connecting a monitor

If you want to view your presentation close-up on a monitor as well as on the screen, you can connect the **MONITOR OUT** signal output socket on the projector to an external monitor with a VGA cable following the instructions below:

To connect the projector to a monitor:

1. Connect the projector to a computer as described in "[Connecting a computer](#)" on page 13.
2. Take a suitable VGA cable (only one supplied) and connect one end of the cable to the D-Sub input socket of the video monitor.
Or if your monitor is equipped with a DVI input socket, take a VGA to DVI-A cable and connect the DVI end of the cable to the DVI input socket of the video monitor.
3. Connect the other end of the cable to the **MONITOR OUT** socket on the projector.

 **The MONITOR OUT output only works when COMPUTER IN1 connection is made to the projector.**

Connecting Video source devices

You can connect your projector to various Video source devices that provide any one of the following output sockets:

- HDMI
- Component Video
- S-Video
- Video (composite)

You need only connect the projector to a Video source device using just one of the above connecting methods, however each provides a different level of video quality. The method you choose will most likely depend upon the availability of matching terminals on both the projector and the Video source device as described below:

Best video quality

The best available video connection method is HDMI. If your source device is equipped with a HDMI socket, you can enjoy uncompressed digital video quality.

See ["Connecting an HDMI device" on page 15](#) for how to connect the projector to a HDMI source device and other details.

If no **HDMI** source is available, the next best video signal is Component video (not to be confused with composite video). Digital TV tuner and DVD players output Component video natively, so if available on your devices, this should be your connection method of choice in preference to (composite) video.

See ["Connecting a Component Video source device" on page 15](#) for how to connect the projector to a component video device.

Better video quality

The S-Video method provides a better quality analog video than standard composite Video. If you have both composite Video and S-Video output terminals on your Video source device, you should elect to use the S-Video option.

See ["Connecting an S-Video source device" on page 16](#) for how to connect the projector to an S-Video device.

Least video quality

Composite Video is an analog video and will result in a perfectly acceptable, but less than optimal result from your projector, being the least video quality of the available methods described here.

See ["Connecting a composite Video source device" on page 16](#) for how to connect the projector to a composite Video device.

Connecting audio

The projector has one built-in mono speaker which is designed to provide basic audio functionality accompanying data presentations for business purposes only. It is not designed for, nor intended for stereo audio reproduction use as might be expected in home theater or home cinema applications. Any stereo audio input (if provided), is mixed into a common mono audio output through the projector speaker.

If you wish, you can make use of the projector (mixed mono) speaker in your presentations, and also connect separate amplified speakers to the Audio Out socket of the projector. The audio output is a mixed mono signal and controlled by the projector Volume and Mute settings.

If you have a separate sound system, you will most likely want to connect the audio output of your Video source device to that sound system, instead of to the mono audio projector.

-  • **The audio output only works when a signal source is connected to the projector.**
- **When an audio cable is connected to the AUDIO OUT port, the projector's speaker will be muted.**

Connecting an HDMI device

You should use an HDMI cable when making connection between the projector and HDMI devices.

To connect the projector to an HDMI device:

1. Take an HDMI cable and connect one end to the HDMI output port of the video device.
2. Connect the other end of the cable to the **HDMI** input port on the projector.

-  **The projector is only capable of playing mixed mono audio, even if a stereo audio input is connected. See "Connecting audio" on page 14 for details.**

Connecting a Component Video source device

Examine your Video source device to determine if it has a set of unused Component Video output sockets available:

- If so, you can continue with this procedure.
- If not, you will need to reassess which method you can use to connect to the device.

To connect the projector to a Component Video source device:

1. Take a VGA (D-Sub)-Component adaptor cable and connect the end with 3 RCA type connectors to the Component Video output sockets of the Video source device. Match the color of the plugs to the color of the sockets; green to green, blue to blue, and red to red.
2. Connect the other end of the VGA (D-Sub)-Component adaptor cable (with a D-Sub type connector) to the **COMPUTER IN1** or **COMPUTER IN2** socket on the projector.

-  • **The projector is only capable of playing mixed mono audio, even if a stereo audio input is connected. See "Connecting audio" on page 14 for details.**
- **If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the Video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.**

Connecting an S-Video source device

Examine your Video source device to determine if it has an unused S-Video output socket available:

- If so, you can continue with this procedure.
- If not, you will need to reassess which method you can use to connect to the device.

To connect the projector to an S-Video source device:

1. Take an S-Video cable and connect one end to the S-Video output socket of the Video source device.
2. Connect the other end of the S-Video cable to the S-VIDEO socket on the projector.

- **The projector is only capable of playing mixed mono audio, even if a stereo audio input is connected. See "Connecting audio" on page 14 for details.**
- **If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the Video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.**
- **If you have already made a Component Video connection between the projector and this S-Video source device using Component Video connections, you need not connect to this device using an S-Video connection as this makes an unnecessary second connection of poorer picture quality. See "Connecting Video source devices" on page 14 for details.**

Connecting a composite Video source device

Examine your Video source device to determine if it has a set of unused composite Video output sockets available:

- If so, you can continue with this procedure.
- If not, you will need to reassess which method you can use to connect to the device.

To connect the projector to a composite Video source device:

1. Take a Video cable and connect one end to the composite Video output socket of the Video source device.
2. Connect the other end of the Video cable to the VIDEO socket on the projector.

- **The projector is only capable of playing mixed mono audio, even if a stereo audio input is connected. See "Connecting audio" on page 14 for details.**
- **If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the Video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.**
- **You need only connect to this device using a composite Video connection if Component Video and S-Video inputs are unavailable for use. See "Connecting Video source devices" on page 14 for details.**

Operation

Starting up the projector

1. Plug the power cord into the projector and into a wall socket. Turn on the wall socket switch (where fitted).
2. Press  on the projector or remote control to start the projector. The **POWER indicator light** stays blue when the projector is on.
(If necessary) Rotate the focus ring to adjust the image clearness.

-  **If the projector is still hot from previous activity, it will run the cooling fan for approximately 60 seconds before energizing the lamp.**
- To maintain the lamp life, once you turn the projector on, wait at least 5 minutes before turning it off.**
- Also, do not turn the projector on for about 10 minutes or more after turning off.**

3. If the projector is activated for the first time, select your OSD language and **High Altitude Mode** following the on-screen instructions.

Language

See "[Using the menus](#)" on page 18 for details.

High Altitude Mode

See "[Operating in a high altitude environment](#)" on page 31 for details.

4. Switch all of the connected equipment on.
5. The projector will start to search for input signals. The current input signal being scanned appears in the upper left corner of the screen. If the projector doesn't detect a valid signal, the message '**No Signal**' will continue to be displayed until an input signal is found.

You can also press **SOURCE** on the projector or remote control to select your desired input signal. See "[Switching input signal](#)" on page 21 for details.

-  **If the frequency/resolution of the input signal exceeds the projector's operating range, you will see the message 'Out of Range' displayed on a blank screen. Please change to an input signal which is compatible with the projector's resolution or set the input signal to a lower setting. See "[Timing chart](#)" on page 51 for details.**

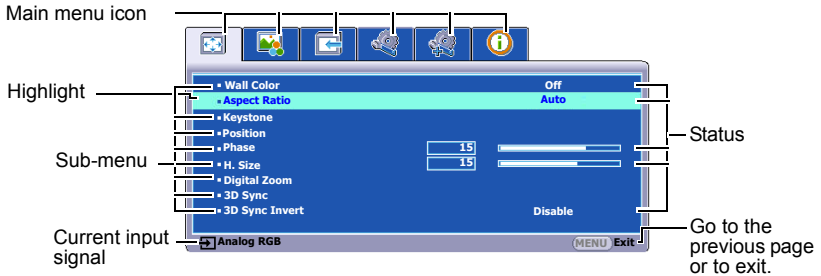

- **OSD languages and user manual languages may not match.**

Using the menus

The projector is equipped with On-Screen Display (OSD) menus for making various adjustments and settings.

 The OSD screenshots below are for reference only, and may differ from the actual design.

Below is the overview of the OSD menu.

To use the OSD menus, please set them to your familiar language first.

1. Press **MENU** on the projector or **MENU/EXIT** on the remote control to turn the OSD menu on.
3. Press **▼** to highlight **Language** and press **MODE/ENTER**.

2. Use **◀▶** to highlight the **SYSTEM SETTING: Basic** menu.
4. Press **◀/▲/▼/▶** to select a preferred language.
5. Press **MENU** on the projector or **MENU/EXIT** on the remote control to leave and save the settings.

	: DISPLAY		: SYSTEM SETTING: Basic
	: PICTURE		: SYSTEM SETTING: Advanced
	: SOURCE		: INFORMATION

Utilizing the password function

For security purposes and to help prevent unauthorized use, the projector includes an option for setting up password security. The password can be set through the On-Screen Display (OSD) menu. For details of the OSD menu operation, please refer to "Using the menus" on page 18.

 You will be inconvenienced if you activate the password functionality and subsequently forget the password. Print this user manual (if necessary) and write the password you used in this manual, and keep it in a safe place for later use.

Setting a password

1. Open the OSD menu and go to the **SYSTEM SETTING: Advanced > Security Settings** menu. Press **MODE/ENTER** on the projector or remote control. The **Security Settings** page is displayed.
2. Highlight **Change Password** and press **MODE/ENTER**.
3. As pictured to the right, the four arrow keys

(**◀, ▲, ▼, ▶**) respectively represent 4 digits (1, 2, 3, 4). According to the password you desire to set, press the arrow keys to enter six digits for the password.

4. Confirm the new password by re-entering the new password.

Once the password is set, the OSD menu returns to the **Security Settings** page.

5. To activate the **Power on Lock** function, press **▲/▼** to highlight **Power on Lock** and press **◀▶** to select **On**. When the **Power on Lock** function is activated, you have to enter the correct password to turn on the projector.
6. To leave the OSD menu, press **MENU** on the projector or **MENU/EXIT** on the remote control.

 • **Once a password has been set, the projector cannot be used unless the correct password is entered every time the projector is started.**

- **The digits being input will be displayed as asterisks on-screen. Write your selected password down here in this user manual in advance or right after the password is entered so that it is available to you should you ever forget it.**

Password: _ _ _ _ _

Keep this user manual in a safe place.

If you forget the password

If the password function is activated, you will be asked to enter the six-digit password every time you turn on the projector. If you enter the wrong password, the password error message as pictured to the right is displayed lasting for three seconds, and the message 'INPUT PASSWORD' follows. You can retry by entering another six-digit password, or if you did not record the password in this user manual, and you absolutely do not remember it, you can use the password recall procedure. See "Entering the password recall procedure" on page 20 for details.

If you enter an incorrect password 5 times in succession, the projector will automatically shut down in a short time.

Entering the password recall procedure

1. Open the OSD menu and go to the **SYSTEM SETTING: Advanced > Security Settings > Change Password** menu.
2. Press **MODE/ENTER** on the projector or remote control. The message '**INPUT CURRENT PASSWORD**' is displayed.
3. Press and hold **AUTO** on the remote control for 3 seconds. The projector will display a coded number on the screen.
4. Write down the number and turn off your projector.
5. Seek help from the local dealer to decode the number. You may be required to provide proof of purchase documentation to verify that you are an authorized user of the projector.

Changing the password

1. Open the OSD menu and go to the **SYSTEM SETTING: Advanced > Security Settings > Change Password** menu.
2. Press **MODE/ENTER** on the projector or remote control. The message '**INPUT CURRENT PASSWORD**' is displayed.
3. Enter the old password.
 - If the password is correct, another message '**INPUT NEW PASSWORD**' is displayed.
 - If the password is incorrect, the password error message is displayed lasting for three seconds, and the message '**INPUT CURRENT PASSWORD**' is displayed for your retry. You can press **MENU/EXIT** on the projector or **Exit** on the remote control to cancel the change or try another password.
4. Enter a new password.
5. Confirm the new password by re-entering the new password.
6. You have successfully assigned a new password to the projector. Remember to enter the new password next time the projector is started.
7. To leave the OSD menu, press **MENU** on the projector or **MENU/EXIT** on the remote control.

 The digits being input will be displayed as asterisks on-screen. Write your selected password down here in this user manual in advance or right after the password is entered so that it is available to you should you ever forget it.

Password: _ _ _ _ _

Keep this user manual in a safe place.

Disabling the password function

To disable password protection, go back to the **SYSTEM SETTING: Advanced > Security Settings > Power on Lock** menu after opening the OSD menu system. Select **Off** by pressing **◀/▶**. The message 'INPUT PASSWORD' is displayed. Enter the current password.

- If the password is correct, the OSD menu returns to the **Security Settings** page with 'Off' shown in the row of **Power on Lock**. You will not have to enter the password next time you turn on the projector.
- If the password is incorrect, the password error message is displayed lasting for three seconds, and the message 'INPUT PASSWORD' is displayed for your retry. You can press **MENU** on the projector or **MENU/EXIT** on the remote control to cancel the change or try another password.

 **Though the password function is disabled, you need to keep the old password in hand should you ever need to re-activate the password function by entering the old password.**

Switching input signal

The projector can be connected to multiple devices at the same time. However, it can only display one full screen at a time.

Be sure the **Quick Auto Search** function in the **SOURCE** menu is **On** if you want the projector to automatically search for the signals.

You can also manually select the desired signal by pressing one of the source selection keys on the remote control, or cycle through the available input signals. Once you have done this, the **Quick Auto Search** function will be turned off automatically.

1. Press **SOURCE** on the projector or remote control. A source selection bar is displayed.
2. Press **▲/▼** until your desired signal is selected and press **MODE/ENTER** on the projector or remote control.

Once detected, the selected source information will be displayed on the screen for seconds. If there are multiple devices connected to the projector, repeat steps 1-2 to search for another signal.

-  • **The brightness level of the projected image will change accordingly when you switch between different input signals. Data (graphic) "computer" presentations using mostly static images are generally brighter than "Video" using mostly moving images (movies).**
- **The input signal type effects the options available for the Preset Mode. See "Selecting a preset mode" on page 26 for details.**
 - **Please see "Projector specifications" on page 48 for the native display resolution of this projector. For best display picture results, you should select and use an input signal which outputs at this resolution. Any other resolutions will be scaled by the projector depending upon the 'aspect ratio' setting, which may cause some image distortion or loss of picture clarity. See "Selecting the aspect ratio" on page 24 for details.**

Adjusting the projected image

Adjusting the projection angle

The projector is equipped with two adjuster feet. They change the image height and vertical projection angle. Screw the adjuster feet to fine tune the angle until the image is positioned where you want it.

If the projector is not placed on a flat surface or the screen and the projector are not perpendicular to each other, the projected image becomes trapezoidal. To correct this situation, see "[Correcting keystone](#)" on page 23 for details.

- ⚠️ • Do not look into the lens while the lamp is on. The strong light from the lamp may cause damage to your eyes.
- Be careful when you screw the front adjuster foot as it is close to the exhaust vent where hot air comes from.

Auto-adjusting the image

In some cases, you may need to optimize the picture quality. To do this, press **AUTO** on the remote control or activate the **Auto Adjustment** function in the **SOURCE** menu. Within 3 seconds, the built-in Intelligent Auto Adjustment function will re-adjust the values of Frequency and Clock to provide the best picture quality.

The current source information will be displayed in the upper left corner of the screen for 3 seconds.

- ☞ • The screen will be blank while AUTO is functioning.
- This function is only available when computer signal (analog RGB) is selected.

Fine-tuning the image clarity

1. Adjust the projected image to the size that you need using the zoom ring.
2. If necessary, sharpen the image by rotating the focus ring.

Correcting keystone

Keystoning refers to the situation where the projected image is noticeably wider at either the top or bottom. It occurs when the projector is not perpendicular to the screen.

To correct this, besides adjusting the height of the projector, you will need to manually correct it following one of these steps.

- Using the remote control

Press **▼/▲** on the projector or remote control to display the Keystone correction page. Press **▲** to correct keystoning at the top of the image. Press **▼** to correct keystoning at the bottom of the image.

- Using the OSD menu

1. Press **MENU** on the projector or **MENU/EXIT** on the remote control and then press **◀▶** until the **DISPLAY** menu is highlighted.
2. Press **▼** to highlight **Keystone** and press **MODE/ENTER** on the projector or remote control. The **Keystone** correction page is displayed.
3. Press **▲** to correct keystoning at the top of the image or press **▼** to correct keystoning at the bottom of the image.

Magnifying and searching for details

If you need to find the details on the projected picture, magnify the picture. Use the direction arrow keys for navigating the picture.

- Using the remote control

1. Press **Magnify + /Magnify -** on the remote control to display the Zoom bar.
2. Press **Magnify +** on the remote control or **▲** on the projector repeatedly to magnify the picture to a desired size.
3. To navigate the picture, press the directional arrows (**◀, ▲, ▼, ▶**).
4. To reduce size of the picture, press **Magnify -** on the remote control, or **▼** on the projector. You can also restore the picture to its original size by pressing the **AUTO** button on the remote control.

- Using the OSD menu

1. Press **MENU** on the projector or **MENU/EXIT** on the remote control and then press **◀▶** until the **DISPLAY** menu is highlighted.
2. Press **▼** to highlight **Magnify** and press **MODE/ENTER** on the projector remote control. The Zoom bar is displayed.
3. Repeat steps 2-4 in the section of Using the remote control above.

 **The picture can only be navigated after the picture is magnified. You can further magnify the picture while searching for details.**

Selecting the aspect ratio

The 'aspect ratio' is the ratio of the image width to the image height. Most analog TV and computers are in 4:3 ratio, and digital TV and DVDs are usually in 16:9 ratio.

With the advent of digital signal processing, digital display devices like this projector can dynamically stretch and scale the image output to a different aspect than that of the image input signal.

To change the projected image ratio (no matter what aspect the source is):

1. Press **MENU** on the projector or **MENU/EXIT** on the remote control and then press **◀▶** until the **DISPLAY** menu is highlighted.
2. Press **▼** to highlight **Aspect Ratio**.
3. Press **◀▶** to select an aspect ratio to suit the format of the video signal and your display requirements.

About the aspect ratio

 In the pictures below, the black portions are inactive areas and the white portions are active areas. OSD menus can be displayed on those unused black areas.

1. **Auto:** Scales an image proportionally to fit the projector's native resolution in its horizontal width. This is suitable for the incoming image which is neither in 4:3 nor 16:9 and you want to make most use of the screen without altering the image's aspect ratio.

2. **Real:** The image is projected as its original resolution, and resized to fit within the display area. For input signals with lower resolutions, the projected image will display smaller than if resized to full screen. You could adjust the zoom setting or move the projector towards the screen to increase the image size if necessary. You may also need to refocus the projector after making these adjustments.

3. **4:3:** Scales an image so that it is displayed in the center of the screen with a 4:3 aspect ratio. This is most suitable for 4:3 images like computer monitors, standard definition TV and 4:3 aspect DVD movies, as it displays them without aspect alteration.

4. **16:9:** Scales an image so that it is displayed in the center of the screen with a 16:9 aspect ratio. This is most suitable for images which are already in a 16:9 aspect, like high definition TV, as it displays them without aspect alteration.

Optimizing the image

Selecting a preset mode

The projector is preset with several predefined preset modes so that you can choose one to suit your operating environment and input signal picture type.

To select an operation mode that suits your need, you can follow one of the following steps.

- Press **MODE/ENTER** on the projector remote control repeatedly until your desired mode is selected.
- Go to the **PICTURE > Preset Mode** menu and press ◀▶ to select a desired mode.

The preset modes available for different types of signals are listed below.

1. **Bright mode:** Maximizes the brightness of the projected image. This mode is suitable for environments where extra-high brightness is required, such as using the projector in well lit rooms.
2. **Presentation mode:** Is designed for presentations under daylight environment to match computer and notebook computer coloring.
3. **sRGB mode:** Maximizes the purity of RGB colors to provide true-to-life images regardless of brightness setting. It is most suitable for viewing photos taken with an sRGB compatible and properly calibrated camera, and for viewing computer graphic and drawing applications.
4. **Cinema mode:** Is appropriate for playing colorful movies, video clips from digital cameras or DVs through the computer input for best viewing in a blackened (little light) environment.
5. **Game mode:** Suitable for all types of entertainment media, including gaming and movies.
6. **User mode:** Recalls the settings customized based on the current available preset modes. See "[Setting the User mode](#)" on page 26 for details.

Setting the User mode

1. Press **MENU** on the projector or **MENU/EXIT** on the remote control to open the On-Screen Display (OSD) menu.
2. Go to the **PICTURE > Preset Mode** menu.
3. Press ◀▶ to select **User**. The adjustments you make in the **Brightness, Contrast, Color, Tint, Sharpness, Brilliant Color, Color Temperature** and **3D Color Management** will automatically be saved as the **User** mode.

Fine-tuning the image quality in user modes

According to the detected signal type, there are some user-definable functions available when **User** mode is selected. You can make adjustments to these functions based on your needs.

Adjusting Brightness

Highlight the **PICTURE > Brightness** menu and press ◀▶.

The higher the value, the brighter the image. And the lower the setting, the darker the image. Adjust this control so the black areas of the image appear just as black and that detail in the dark areas is visible.

Adjusting Contrast

Highlight the **PICTURE** > **Contrast** menu and press ◀▶.

The higher the value, the greater the contrast. Use this to set the peak white level after you have previously adjusted the **Brightness** setting to suit your selected input and viewing environment.

Adjusting Color

Highlight the **PICTURE** > **Color** menu and press ◀▶.

Lower setting produces less saturated colors. If the setting is too high, colors on the image will be overpowering, which makes the image unrealistic.

 This function is only available when a **Video, S-Video or Component Video** signal is selected.

Adjusting Tint

Highlight the **PICTURE** > **Tint** menu and press ◀▶.

The higher the value, the more reddish the picture becomes. The lower the value, the more greenish the picture becomes.

 This function is only available when a **Video, S-Video with NTSC** signal is selected.

Adjusting Sharpness

Highlight the **PICTURE** > **Sharpness** menu and press ◀▶.

The higher the value, the sharper the picture becomes. The lower the value, the softer the picture becomes.

 This function is only available when a **Video, S-Video or Component Video** signal is selected.

Adjusting Brilliant Color

Highlight the **PICTURE** > **Brilliant Color** menu and press ◀▶.

This feature utilizes a new color-processing algorithm and system level enhancements to enable higher brightness while providing truer, more vibrant colors in the projected picture. It enables a greater than 50% brightness increase in mid-tone images, which are common in video and natural scenes, so the projector reproduces images in realistic and true colors. If you prefer images with that quality, select **On**. If you don't need it, select **Off**.

When **Off** is selected, the **Color Temperature** and **3D Color Management** functions are not available.

Selecting a Color Temperature

Highlight the **PICTURE** > **Color Temperature** menu and press ◀▶.

The options available for color temperature* settings vary according to the signal type selected.

1. **Cool:** Makes images appear bluish white.
2. **Normal:** Maintains normal colorings for white.
3. **Warm:** Makes images appear reddish white.

*About color temperatures:

There are many different shades that are considered to be "white" for various purposes. One of the common methods of representing white color is known as the "color temperature". A white color with a low color temperature appears to be reddish white. A white color with a high color temperature appears to have more blue in it.

Color Management

Only in permanent installations with controlled lighting levels such as boardrooms, lecture theaters, or home theaters, should color management be considered. Color management provides fine color control adjustment to allow for more accurate color reproduction, should you require it.

If you have purchased a test disc which contains various color test patterns and can be used to test the color presentation on monitors, TVs, projectors, etc., you can project any image from the disc on the screen and enter the **3D Color Management** menu to make adjustments.

To adjust the settings:

1. Go to the **DISPLAY** menu and highlight **3D Color Management**.
2. Press **MODE/ENTER** on the projector or remote control and the **3D Color Management** page is displayed.
3. Highlight **Primary Color** and press ◀▶ to select a color from among Red, Yellow, Green, Cyan, Blue, or Magenta.
4. Press ▼ to highlight **Hue** and press ◀▶ to select its range. Increase in the range will include colors consisted of more proportions of its two adjacent colors.

Please refer to the illustration to the right for how the colors relate to each other.

For example, if you select Red and set its range at 0, only pure red in the projected picture will be selected. Increasing its range will include red close to yellow and red close to magenta.

5. Press ▼ to highlight **Saturation** and adjust its values to your preference by pressing ◀▶. Every adjustment made will reflect to the image immediately.

For example, if you select Red and set its value at 0, only the saturation of pure red will be affected.

 **Saturation is the amount of that color in a video picture. Lower settings produce less saturated colors; a setting of "0" removes that color from the image entirely. If the saturation is too high, that color will be overpowering and unrealistic.**

6. Press ▼ to highlight **Gain** and adjust its values to your preference by pressing ◀▶. The contrast level of the primary color you select will be affected. Every adjustment made will reflect to the image immediately.
7. Repeat steps 3 to 6 for other color adjustments.
8. Make sure you have made all of the desired adjustments.
9. Press **MENU** on the projector or **MENU/EXIT** on the remote control to exit and save the settings.

Setting the presentation timer

 This function is only available when an input signal is selected and active.

Presentation timer can indicate the presentation time on the screen to help you achieve better time management when giving presentations. Follow these steps to utilize this function:

1. Press **TIMER SET UP** on the remote control to access the **Presentation Timer** menu or go to the **SYSTEM SETTING: Basic > Presentation Timer** menu and press **MODE/ENTER** to display the **Presentation Timer** page.
2. Highlight **Timer Period** and decide the time period by pressing **◀/▶**. The length of time can be set from 1 to 5 minutes in 1-minute increments and 5 to 240 minutes in 5-minute increments.

 If the timer is already on, the timer will restart whenever the Timer Period is reset.

3. Press **▼** to highlight **Timer Display** and choose if you want the timer to show up on the screen by pressing **◀/▶**.

Selection	Description
Always	Displays the timer on screen throughout the presentation time.
1 min/2 min/3 min	Displays the timer on screen in the last 1/2/3 minute(s).
Never	Hides the timer throughout the presentation time.

4. Press **▼** to highlight **Timer Position** and set the timer position by pressing **◀/▶**.

Top-Left → Bottom-Left → Top-Right → Bottom-Right

5. Press **▼** to highlight **Timer Counting Direction** and select your desired counting direction by pressing **◀/▶**.

Selection	Description
Count Up	Increases from 0 to the preset time.
Count Down	Decreases from the preset time to 0.

6. Press **▼** to highlight **Sound Reminder** and decide if you want to activate sound reminder by pressing **◀/▶**. If you select **On**, a double beep sound will be heard at the last 30 seconds of counting down/up, and a triple beep sound will be produced when the timer is up.
7. To activate the presentation timer, press **▼** and press **◀/▶** to highlight **On** and press **MODE/ENTER**.
8. A confirmation message displays. Highlight **Yes** and press **MODE/ENTER** on the projector or remote control to confirm. You will see the message “**Timer is On**” displaying on the screen. The timer starts counting when the timer is on.

To cancel the timer, perform the following steps:

1. Go to the **SYSTEM SETTING: Basic > Presentation Timer** menu and highlight **Off**. Press **MODE/ENTER**. A confirmation message displays.
2. Highlight **Yes** and press **MODE/ENTER** to confirm. You will see the message “**Timer is Off**” displaying on the screen.

Hiding the image

In order to draw the audience's full attention to the presenter, you can use ◀ on the projector or **BLANK** on the remote control to hide the screen image. Press any key on the projector or remote control to restore the image.

You can set the blank time in the **SYSTEM SETTING: Basic > Blank Timer** menu to let the projector return the image automatically after a period of time when there is no action taken on the blank screen.

CAUTION

Do not block the projection lens from projecting as this could cause the blocking object to become heated and deformed or even cause a fire.

Locking control keys

With the control keys on the projector locked, you can prevent your projector settings from being changed accidentally (by children, for example). When the **Panel Key Lock** is on, no control keys on the projector will operate except ⏻.

1. Press ▶ on the projector or **Lock**  on the remote control, or go to the **SYSTEM SETTING: Basic > Panel Key Lock** menu, and select **On** by pressing ◀▶ on the projector or remote control.
2. A confirmation message is displayed. Select **Yes** to confirm.

To release panel key lock, press and hold ▶ on the projector or **Lock**  on the remote control for 3 seconds.

You can also use the remote control to enter the **SYSTEM SETTING: Basic > Panel Key Lock** menu and press ◀▶ to select **Off**.

-  • **Keys on the remote control are still functional when panel key lock is enabled.**
- **If you press ⏻ to turn off the projector without disabling panel key lock, the projector will still be in locked status the next time it is turned on.**

Freezing the image

Press **FREEZE** on the remote control to freeze the image. The word '**FREEZE**' will be displayed in the upper left corner of the screen. To release the function, press any key on the projector or remote control.

Even if an image is frozen on the screen, the pictures are running on the video or other device. If the connected devices have active audio output, you will still hear the audio even though the image is frozen on screen.

Operating in a high altitude environment

We recommend you use the **High Altitude Mode** when your environment is between 1500 m–3000 m above sea level, and temperature is between 0°C–35°C.

CAUTION

Do not use the High Altitude Mode if your altitude is between 0 m and 1500 m and temperature is between 0°C and 35°C. The projector will be over cooled, if you turn the mode on under such a condition.

To activate the **High Altitude Mode**:

1. Press **MENU** on the projector or **MENU/EXIT** on the remote control and then press   until the **SYSTEM SETTING: Advanced** menu is highlighted.
2. Press  to highlight **High Altitude Mode** and press   to select **1** or **2**.
3. A confirmation message is displayed.
4. Highlight **1** and press **MODE/ENTER** on the projector or remote control.

Operation under "**High Altitude Mode**" may cause a higher decibel operating noise level because of increased fan speed necessary to improve overall system cooling and performance.

If you use this projector under other extreme conditions excluding the above, it may display auto shut-down symptoms, which is designed to protect your projector from over-heating. In cases like this, you should switch to **High Altitude Mode** to solve these symptoms. However, this is not to state that this projector can operate under any and all harsh or extreme conditions.

Shutting down the projector

1. Press  and a confirmation message is displayed prompting you. If you don't respond in a few seconds, the message will disappear.
2. Press  a second time.
3. Disconnect the power cord from the wall socket if the projector will not be used in an extended period of time.

CAUTION

- **To protect the lamp, the projector will not respond to any commands during the cooling process.**
- **Do not unplug the power cord before the projector shutdown sequence is complete.**

Menu operation

Menu system

Please note that the on-screen display (OSD) menus vary according to the signal type selected.

The menu items are available when the projector detects at least one valid signal. If there is no equipment connected to the projector or no signal detected, limited menu items are accessible.

Function	Description	
2. PICTURE menu	Preset Mode	Pre-defined preset modes are provided so you can optimize your projector image set-up to suit your program type. See " Selecting a preset mode " on page 26 for details.
	Brightness	Adjusts the brightness of the image. See " Adjusting Brightness " on page 26 for details.
	Contrast	Adjusts the degree of difference between dark and light in the image. See " Adjusting Contrast " on page 27 for details.
	Color	Adjusts the color saturation level -- the amount of each color in a video image. See " Adjusting Color " on page 27 for details.  This function is only available when a Video, S-Video or Component Video signal is selected.
	Tint	Adjusts the red and green color tones of the image. See " Adjusting Tint " on page 27 for details.  The function is only available when a Video or S-Video signal with NTSC system is selected.
	Sharpness	Adjusts the image to make it look sharper or softer. See " Adjusting Sharpness " on page 27 for details.  This function is only available when a Video, S-Video or Component Video signal is selected.
	Brilliant Color	Adjusts white peaking while maintaining correct color presentation. See " Adjusting Brilliant Color " on page 27 for details.
	Color Temperature	See " Selecting a Color Temperature " on page 27 for details.
	3D Color Management	See " Color Management " on page 28 for details.
3. SOURCE menu	Quick Auto Search	See " Switching input signal " on page 21 for details.
	Auto Adjustment	See " Auto-adjusting the image " on page 22 for details.

Function	Description
4. SYSTEM SETTING: Basic menu	Presentation Timer Reminds the presenter to finish the presentation within a certain time frame. See "Setting the presentation timer" on page 29 for details.
	Language Sets the language for the On-Screen Display (OSD) menus. See "Using the menus" on page 18 for details.
	Mirror See "Choosing a location" on page 10 for details.
	Auto Power Off Allows the projector to turn off automatically if no input signal is detected after a set period of time. See "Setting Auto Power Off" on page 42 for details.
	Blank Timer Sets the image blank time when the Blank feature is activated, once elapsed the image will return to the screen. See "Hiding the image" on page 30 for details.
	Panel Key Lock Disables or enables all panel key functions except POWER on the projector and keys on the remote control. See "Locking control keys" on page 30 for details.
	Sleep Timer This function allows the projector to turn off automatically if there is no user operation after a set period of time. Use the ◀▶ to select the period of time.
Background Color Allows you to select which logo screen will be displayed during projector start-up.	
5. SYSTEM SETTING: Advanced menu	Quick Cooling Enables or disables the Quick Cooling function. Use the ◀▶ buttons to select On or Off . Selecting On enables the function and projector cooling time will be shortened from a normal 70-second duration to approximately 13 seconds.
	High Altitude Mode A mode for operation in high altitude areas. See "Operating in a high altitude environment" on page 31 for details.
	Audio Settings Mute Mutes the sound received from AUDIO IN and HDMI . Volume Adjusts the sound level received from AUDIO IN and HDMI .
	Menu Settings Menu Display Time Sets the length of time the OSD will remain active after your last key press. The range is from 5 to 30 seconds in 5-second increments. Menu Position Sets the On-Screen Display (OSD) menu position.

Maintenance

Care of the projector

Your projector needs little maintenance. The only thing you need to do on a regular basis is to keep the lens clean.

Never remove any parts of the projector except the lamp. Contact your dealer if other parts need replacing.

Cleaning the lens

Clean the lens whenever you notice dirt or dust on the surface.

- Use a canister of compressed air to remove dust.
- If there is dirt or smears, use lens-cleaning paper or moisten a soft cloth with lens cleaner and gently wipe the lens surface.

CAUTION

Never rub the lens with abrasive materials.

Cleaning the projector case

Before you clean the case, turn the projector off using the proper shutdown procedure as described in "[Shutting down the projector](#)" on page 31 and unplug the power cord.

- To remove dirt or dust, wipe the case with a soft, lint-free cloth.
- To remove stubborn dirt or stains, moisten a soft cloth with water and a neutral pH detergent. Then wipe the case.

CAUTION

Never use wax, alcohol, benzene, thinner or other chemical detergents. These can damage the case.

Storing the projector

If you need to store the projector for an extended time, please follow the instructions below:

- Make sure the temperature and humidity of the storage area are within the recommended range for the projector. Please refer to "[Specifications](#)" on page 48 or consult your dealer about the range.
- Retract the adjuster feet.
- Remove the battery from the remote control.
- Pack the projector in its original packing or equivalent.

Transporting the projector

It is recommended that you ship the projector with its original packing or equivalent.

Lamp information

Getting to know the lamp hour

When the projector is in operation, the duration (in hours) of lamp usage is automatically calculated by the built-in timer. The method of calculating the equivalent lamp hour is as follows:

Total lamp hour = (hours used in **Normal** mode) + (hours used in **Economic** mode) + (hours used in **Intelligent Eco** mode)

To obtain the lamp hour information:

1. Press **MENU** on the projector or **MENU/EXIT** on the remote control and then press **◀▶** until the **SYSTEM SETTING: ADVANCED** menu is highlighted.
2. Press **▼** to highlight **Lamp Settings** and press **MODE/ENTER** on the projector or remote control. The **Lamp Settings** page is displayed.
3. You will see the **Equivalent lamp hour** information on the menu.
4. To leave the menu, press **MENU** on the projector or **MENU/EXIT** on the remote control.

You can also get the lamp hour information on the **INFORMATION** menu.

Extending lamp life

The projection lamp is a consumable item. To keep the lamp life as long as possible, you can do the following settings via the OSD menu.

Setting Lamp Mode as Economic or Intelligent Eco

Using **Economic/Intelligent Eco** mode reduces system noise and power consumption. If the **Economic/Intelligent Eco** mode is selected, the light output will be reduced and result in darker projected pictures.

Setting the projector in **Economic/Intelligent Eco** mode also extends the lamp operation life. To set **Intelligent Eco** mode, go into the **SYSTEM SETTING: ADVANCED > Lamp Settings > Lamp Mode** menu and press **◀▶**.

Setting Auto Power Off

This function allows the projector to turn off automatically if no input source is detected after a set period of time to prevent unnecessary waste of lamp life.

To set **Auto Power Off**, go into the **SYSTEM SETTING: BASIC > Auto Power Off** menu and press **◀▶**. If the preset time lengths are not suitable for your presentation, select **Disable**. The projector will not automatically shut down in a certain time period.

Replacing the lamp

To prepare a new lamp, contact your dealer and tell the lamp type number.

Type number: DT01461

WARNING

- The projector uses a high-pressure mercury glass lamp.
- The lamp can break with a loud bang, or burn out, if jolted or scratched, handled while hot, or worn over time. Note that each lamp has a different lifetime, and some may burst or burn out soon after you start using them.

Hg - Lamp contains mercury. Manage in accordance with local disposal laws. See www.lamprecycle.org

- To reduce the risk of electrical shock, always turn the projector off and disconnect the power cord before changing the lamp.
- To reduce the risk of severe burns, allow the projector to cool for at least 45 minutes before replacing the lamp.
- To reduce the risk of injuries to fingers and damage to internal components, use caution when removing lamp glass that has shattered into sharp pieces. Before replacing the lamp, clean the lamp compartment and dispose of cleaning materials. Be careful of sharp edges in the lamp compartment. Wash hands after lamp replacement.
- If the lamp should break (it will make a loud bang when it does), ventilate the room well, and make sure not to inhale the gas or fine particles that come out from the projector's vent holes, and not to get them into your eyes or mouth.
- Only certified lamps are tested with this projector. Use of other lamps may cause electrical shock and fire.
- Be sure to place the projector on a flat surface to replace the lamp.

1. Turn the power off and disconnect the power cord from the wall socket. If the lamp is hot, avoid burns by waiting for approximately 45 minutes until the lamp has cooled.
2. Prepare a new lamp. If the projector is mounted in a high position, or if the lamp has broken, also ask the dealer to replace the lamp.
3. Loosen the screw of the lamp cover. Refer to the right figure to identify the screw.
4. Remove the lamp cover from the projector.

WARNING

- Do not turn the power on with the lamp cover removed.
- Do not insert your fingers between the lamp and the projector. It may cause injuries.

-
5. Remove the protection film. Loosen the screw that secures the lamp. Refer to the right figure to identify the screw.

-
6. Disconnect the lamp's wire connector from the projector, and then slowly pick up the lamp by the handle.

⚠ CAUTION

- **Pulling it too quickly may cause the lamp to break and scatter broken glass in the projector.**
- **Do not place the lamp in locations where water might splash on it, children can reach it, or near flammable materials.**
- **Do not insert your hands into the projector after the lamp is removed. If you touch the optical components inside, it could cause color unevenness and distortion of the projected images.**

-
8. Insert the new lamp into the lamp compartment and make sure it fits in the projector. Connect the new lamp's wire connector to the projector.

-
9. Tighten the screw that secures the lamp.

⚠ CAUTION

- **Loose screw may cause a bad connection, which could result in malfunction.**
- **Do not over tighten the screw.**

10. Ensure the handle is fully laid flat and locked in place.
11. Replace the new protection film that comes with the new lamp.

-
12. Replace the lamp cover on the projector.

-
13. Tighten the screw that secures the lamp cover.

CAUTION

- Loose screw may cause a bad connection, which could result in malfunction.
- Do not over tighten the screws.

14. Restart the projector.

CAUTION

Do not turn the power on with the lamp cover removed.

Resetting the lamp timer

15. After the startup logo, open the On-Screen Display (OSD) menu.
16. Go to the **SYSTEM SETTING: ADVANCED > Lamp Settings** menu. Press **MODE/ENTER** on the projector or remote control. The **Lamp Settings** page is displayed.
17. Press **▼** to highlight **Reset lamp timer** and press **MODE/ENTER** on the projector or remote control. A warning message is displayed asking if you want to reset the lamp timer.
18. Highlight **Reset** and press **MODE/ENTER** on the projector or remote control. The lamp time will be reset to '0'.

CAUTION

Do not reset if the lamp is not new or replaced as this could cause damage.

Troubleshooting

① The projector does not turn on.

Cause	Remedy
There is no power from the power cord.	Plug the power cord into the AC inlet on the projector, and plug the power cord into the power outlet. If the power outlet has a switch, make sure that it is switched on.
Attempting to turn the projector on again during the cooling process.	Wait until the cooling down process has completed.

① No picture

Cause	Remedy
The video source is not turned on or connected correctly.	Turn the video source on and check that the signal cable is connected correctly.
The projector is not correctly connected to the input signal device.	Check the connection.
The input signal has not been correctly selected.	Select the correct input signal with the SOURCE key on the projector or remote control.

① Blurred image

Cause	Remedy
The projection lens is not correctly focused.	Adjust the focus of the lens using the focus ring.
The projector and the screen are not aligned properly.	Adjust the projection angle and direction as well as the height of the projector if necessary.

① Remote control does not work

Cause	Remedy
The battery is out of power.	Replace the battery with a new one.
There is an obstacle between the remote control and the projector.	Remove the obstacle.
You are too far away from the projector.	Stand within 4 meters (~13 feet) of the projector.

Regulation Statements

FCC statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

CAUTION: Changes or modifications not expressly approved by the manufacturer void the user's authority to operate the equipment.

ICES-003

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

WEEE

Disposing of this product correctly will help save valuable resources and prevent any potential negative effects on human health and the environment, which could otherwise arise from inappropriate waste handling.

Please contact your local authority for further details of your nearest designated collection point.

Penalties may be applicable for incorrect disposal of this waste, in accordance with your national legislation.

For business users in the European Union

If you wish to discard electrical and electronic equipment, please contact your dealer or supplier for further information.

Information on Disposal in other Countries outside the European Union

This symbol is only valid in the European Union. If you wish to discard this product please contact your local authorities or dealer and ask for the correct method of disposal.

Warranty and after-service

If an abnormal operation (such as smoke, strange odor or excessive sound) should occur, stop using the projector immediately.

Otherwise if a problem occurs with the projector, first refer to “Troubleshooting”, and run through the suggested checks.

If this does not resolve the problem, please consult your dealer or service company. They will tell you what warranty condition is applied.
