

Dick/Ann,

Based on my recent observations, I recommend replacing the wireless systems in TA-2 and TA-3. They are out of date.

The wireless system in TA-1 is an Audio Technica ATW-1451 and is only 2 years old. I suggest installing the same model in TA-2 and TA-3. I happen to have two in stock. Also, I suggest installing them with a head worn lavalier microphone such as the AT892cW-TH. Both are shown below.

I know that the Telex Prostar I donated for use out at Lake Ann is very old. However, I'm not sure they even use it since the room they are in is very small. You might ask Ann about any need for replacing it.

ATW-1451 receiver and transmitter .....	\$
AT892cW-TH head set .....	\$
Price per system -	\$ Installed.

Note: I personally guarantee that you will experience a quantum leap in terms of speech improvement with the AT892cW-TH. So far, everyone that has purchased this model has been very surprised and happy with them. I do have them in stock as well.
